Attention: Mr. Joseph Reynolds
Treasurer

Dear Mr. Reynolds:

In June of 1970 the office of Kear and Kennedy prepared an application for a Class D non-commercial FM station for Lehigh University to operate on Channel 217 (91.3 MHz), with a power of 10 Watts.

This channel was chosen because it offered the possibility of a modest power increase in the future, whereas the only other channel available, Channel 203 (88.5 MHz), is handicapped because of potential interference to Television Channel 6 in Philadelphia.

The FCC has become increasingly concerned with the operation of Class D educational FM stations in the lower part of the educational FM band in localities near Television Stations on Channel 6. In some cases severe interference has resulted and a substantial number of protests have been received.

We believe that Channel 217 offers the best compromise for Lehigh University.

Yours very truly,

Robert E. L. Kennedy
